PERSONAL PROJECTS

Social Media Web App

- A full-stack social media web application using the MERN stack. This platform allows users to create an account, post updates, follow other users, and engage with their content through likes and comments.
- The front-end of the application was built using React, which provides a responsive and intuitive user interface. Redux was used for state management, allowing for efficient data handling and manipulation.
- On the back-end, the application uses a MongoDB database to store user information, posts, and comments. Node.js and Express were used to handle server-side logic, providing a secure and efficient API for client-server communication.

Portfolio Site

- Portfolio site is a dynamic web application that showcases your skills, experiences, and projects to the world.
- Built using React, the site provides a user-friendly and interactive platform to present your work.
- React's ability to handle complex UI elements and dynamic updates makes it an excellent choice for creating a modern and engaging portfolio.

Weather Site

- A live weather site is a web application that provides real-time weather information to its users.
- The site is built with a combination of technologies, including a front-end framework such as React, and APIs to access current weather data from a reliable source.
- The site displays current weather information for a specific location, including temperature and precipitation.
